(54) Title: METHOD AND APPARATUS FOR CLEANING THE CUTTING SYSTEM OF AN ELECTRIC SHAVER

(57) Abstract: By providing a shaver receiving and supporting housing which is constructed for enabling cleaning fluid to be delivered directly to the interior of a shaver in a highly efficient manner, a fully integrated shaving cleaning system is realized which is capable of providing automated cleaning of the shaver in an efficient and effective manner. In accordance with the present invention, the cleaning fluid is forced through portals formed in the shaver for enabling the fluid to be forcibly delivered directly into the hair pocket of the shaver, thereby enabling the surfaces of the hair pocket, the cutting foils, and the cutting blades to be completely and thoroughly cleaned, with the fluid draining out of the shaver through the cutting foils. In addition, the present invention is constructed for thoroughly and completely cleaning both rotary shavers and foil shavers.
